

## Abstract

### Heat exchanger support system and associated heat exchanger module

The heat exchanger support system (34, 36, 40) consists of a frame (2) comprising horizontal faces (4, 6) and vertical faces (8, 10) furnished with fixing means (42, 50, 72, 74, 80) for fixing heat exchange components such as a condenser (34), an engine cooling radiator (36), a motor-fan unit (38) and a supercharge air radiator (40). Each component is fixed directly to the frame (2) independently of the other components. The frame also comprises attachment elements (28, 30) allowing it to be mounted on a motor vehicle chassis via flexible vibration-damping means.
